Global change presents a growth opportunity for New Zealand

THERE IS A GROWING SENSE OF CHANGE IN THE NEW ZEALAND TOURISM INDUSTRY

2013 was a considerably stronger year than expected for New Zealand tourism. In Ambition 2020, published last year, 2,661,546 visitors were forecast for the year. This was 4.2 percent growth over 2012, however we saw actual visitor growth of 6.1 percent.

Our ability to capture more than our fair share of growth from these trends and deliver on the 2025 ambitious targets will require strategic actions in the following areas such as:

Sustainably developing air capacity.

Targeting for value and increasing our share of voice for target markets.

Competitive visa propositions.

Packaging the right tourism products which meets the needs of high growth consumer segments.

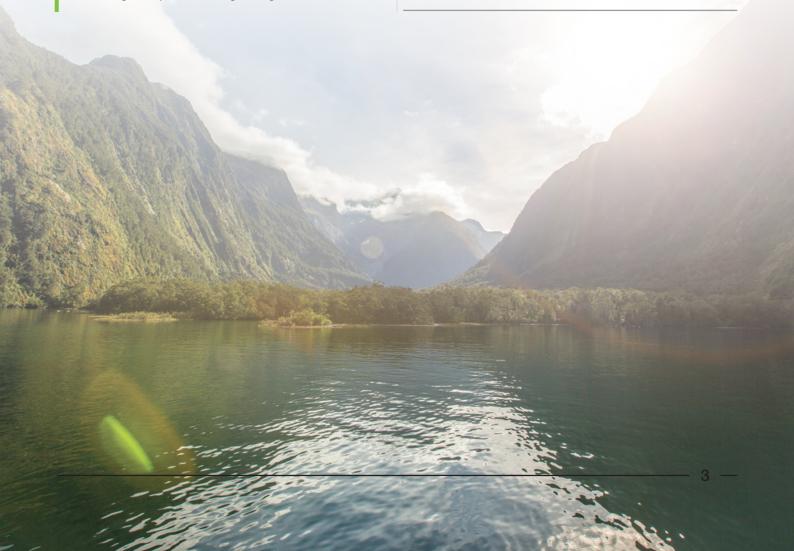

Distributing those products through the right channels.

Significant progress has been made aligning the industry with the release of the Tourism 2025 framework and the setting our ambition of growing international markets by six percent per annum.

As noted in the Tourism 2025 New Zealand's best growth opportunities now lie around Australasia, Asia and the Americas. Australia will always be a key market to New Zealand because of its proximity. Within Asia, China is a stand-out prospect. Within the Americas, the USA remains an important key market, with emerging prospects in South America, the largest being Brazil.

This document updates Ambition 2020 based on the latest economic and market data to 2025 in order to align with the Tourism 2025 timeframe.

5.2 million the number of potential visitors to New Zealand in 2025.

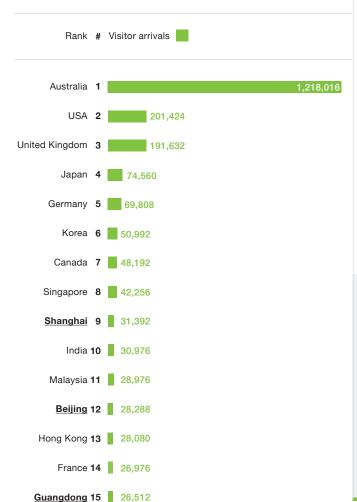

A changing visitor composition

A RAPID PACE OF CHANGE SETS THE TONE TO 2025

While Australia holds steady as New Zealand's largest source of arrivals, China has leapfrogged mature markets such as the United Kingdom an d the United States to become the second largest source of arrivals. In fact, there are some Chinese regions which contribute more arrivals than whole countries.

Below shows that some Chinese regions rank in the top fifteen visitor arrival markets to New Zealand (YE Dec 13).

A NUMBER OF EMERGING ECONOMIES ARE REACHING MIDDLE INCOMES IN ASIA

Huge swathes of population are reaching middle class incomes in China, India and Indonesia. Many developing nations also have some of the highest levels of consumer confidence in the world such as India, the Philippines, Indonesia, Thailand, Brazil, China and Malaysia.

These emerging markets provide significant opportunities for tourism growth. How many visitors eventually come to New Zealand will depend on understanding the in-depth demand shifts in these markets to build product offerings and growing awareness of the New Zealand experience in market. Full development of air connections and capacity on routes are also important supply-side drivers.

Some of the major trends driving change in the visitor composition are:

- Continued growth from China, which constituted 8.45 percent of total arrivals in 2013.
- High rates of growth from smaller, emerging markets such as Malaysia, Singapore and Indonesia.
- A slower than expected Australian economic recovery.

This rapid change in visitor composition has lead to shifts in booking patterns and lead times, marketing channels, and travel and expenditure patterns of visitors to New Zealand.

RESPONDING TO MARKET CONDITIONS

Key implications for New Zealand travel markets are:

- 1. "Business as usual" is a moving target tourism is being reshaped by structural shifts in the world economy, aviation and technology that are permanently changing the dynamics of the industry.
- The visitor portfolio will continue to evolve in response to market conditions, creating opportunities for businesses that understand and adapt to changes.

Our outlook continues to be optimistic

BUILDING ON 2013 MOMENTUM

The world has emerged from a period of financial hardship and discussions have changed from talk of recession to that of recovery, and economic growth in New Zealand is underway. However the upswing is not expected to gain full momentum until 2016. After the better part of a decade in a slump, low cost carriers have reshaped value propositions and will continue to develop in the short and medium-haul markets. This will see other carriers seek opportunities in long-haul, ultra long-haul and alliance arrangements to boost network traffic. High growth potential from Asia and existing revenue streams from traditional markets are expected to see a significant boost in both the number of visitor arrivals and the value they contribute to the economy. Key drivers of this growth include:

Low cost carriers are affecting the value differential and yield positions for travel to ultra long-haul destinations such as New Zealand.

The market will be driven by continued growth in China and emerging markets in Asia and South America such as India, Indonesia and Brazil.

A legislative change in China is designed to ensure travel products sold in country are of a high quality, driving a shift to higher value tourists.

Further penetration into Australia and the Americas also has the potential to stimulate significant growth and help foster air-links with Auckland as a hub between Australasia, Asia and the Americas, further shifting the potential visitor growth profile.

DUAL DESTINATION HOLIDAY VISITORS

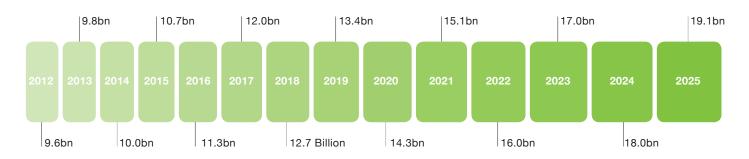

Many tourists visit New Zealand as part of a trip to Australia or another country. Chinese travellers predominantly fall into this segment as do Koreans and Germans. Meanwhile Japanese and Australian travellers are more likely to visit New Zealand on a direct flight.

New Zealand tourism organisations will be challenged to capture growth from these drivers in the years to come. Coordinated programmes of activity will be essential to create the shared vision and alignment for the sector that enables that growth. Tourism 2025 is one such undertaking. With a goal of growing the New Zealand tourism sector to an annual value of \$41 billion by 2025, this programme seeks to align tourism on five dimensions including: insight, targeting for value, visitor experience, productivity and air connectivity as critical enablers of international competitiveness for New Zealand.

2025 Aspirational Value Forecasts

In the near future arrivals growth is forecast to be within a range of 3.62 - 5.52 percent annually. As such an industry goal of six percent value growth to 2025 is achievable.

Analysis is based on current spend, however the industry is targeting an increase average spend through strategies such as a higher mix of FIT, longer stays and a greater share of the luxury segment.

Visitor arrivals to New Zealand

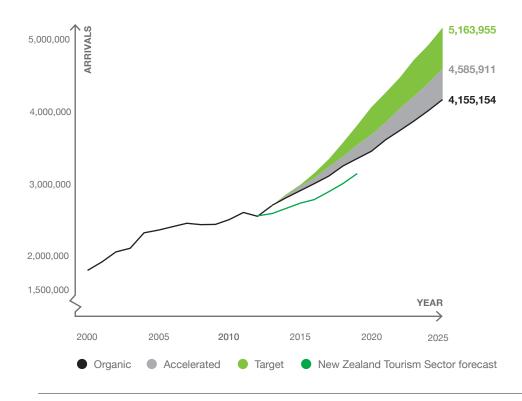

STRONG GROWTH IS EXPECTED TO CONTINUE ACROSS THE INDUSTRY FROM ASIAN MARKETS IN PARTICULAR

Visitor arrivals have the potential to increase by ninety one percent between 2013-2025 to reach a total of 5 million annually by the end of 2025. This represents a doubling of arrivals by 2025 and an annual cumulative average growth rate (CAGR) of 5.52 percent.

These forecasted figures are based on the reasonable expectation that New Zealand can respond quickly and effectively to change, develop new markets, improve air-links and capacity, and gradually improve circumstances for long-haul travel. These factors, combined with New Zealand's enviable range of tourism assets, its proactive approach to promotion, and re-orientation to Asia's development would provide a sound platform for growth to 2025.

5.52% forecast average annual visitor growth for 2013-2025.

Potential Visitor Arrivals to New Zealand 2000 - 2025

FORECAST DRIVERS

Tourism Futures International (TFI) have developed the market forecasts based on reviewing economic baselines and forecast trends, together with assessing the likely or potential air links and capacity and the likely market share. The TFI forecasts by market are also provided on the Ambition 2025 website.

SOURCES OF GROWTH

Booming Asian economies contribute to high growth rates from countries such as China, India and the Philippines. Growth in mature markets is also expected to recover.

Growth in established markets such as Korea and Japan will outstrip the average growth rates from non-Asian markets.

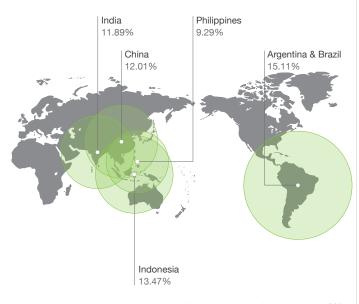

Australia, China, USA, India and the combined region of Argentina, Brazil and Chile present the greatest real visitor growth opportunity.

Outlook for our markets

AUSTRALIA 2025

The Australian visitor market is the major source of revenue for the tourism sector.

Australia is still the largest source of arrivals for New Zealand. Despite a slower than expected economic recovery, growth from Australia is steady and significant with 2013 growing at 5.4 percent rather than the predicted 3.8. In recent years this growth has been driven by New Zealand expats migrating to Australia in record numbers and returning home for holidays. While arrivals of Australian nationals however are reasonably flat and largely driven by capacity, 2013 saw the opening up of more Australian regions with new Auckland-Adelaide flights, new Auckland- and Christchurch-Perth seasonal flights, as well as more capacity added to established routes. 2014 continues this trend with significant additional winter capacity to Queenstown recently announced. The opportunity exists to convert a share of Australian domestic travel to short-haul trips to New Zealand. Building demand means driving growth and connections from regional markets and

increasing New Zealand's share of outbound holiday traffic compared to price competitive Asian offerings. Geo-targeting consumers and driving conversion though a digital front door are among the strategies for building ambitious growth from the Australian market to 2025.

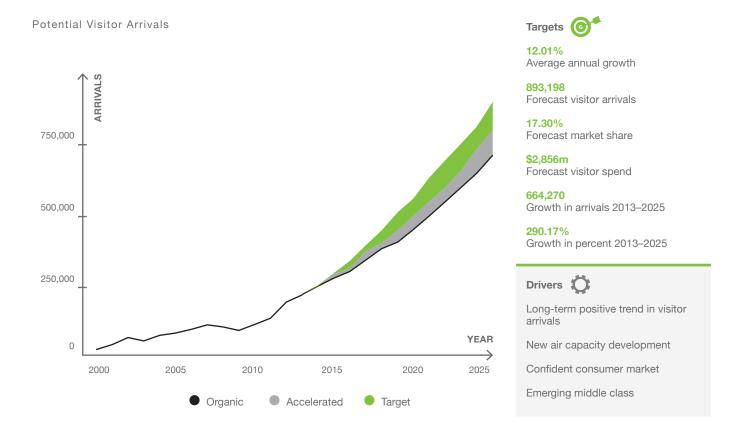

CHINA 2025

China has rapidly become one of New Zealand's top visitor markets and will account for seventeen percent of visitor arrivals in 2025.

Visitor numbers will continue to grow strongly, driven by expanding middle and upper classes. Chinese arrivals to New Zealand will be comprised of more FIT travellers and less groups in coming years. New Zealand received twenty four percent of the visitors to Australasia in the year ended 2013, but had thirty one percent share of the growing holiday market. Some speed bumps may occur, such as the October 2012 travel law change. This saw total Chinese arrivals decline by twelve percent for October through December 2013 compared to the same period in 2012. However since the law change direct arrivals from China actually increased by sixteen percent, while arrivals via Australia decreased by thirty two percent. Also some near-term risk from credit markets in China may affect growth in consumption. However over the medium and long-term,

the continued industrialisation and growing consumption drivers will deliver increasing economic prosperity and more visitors to New Zealand. Increasing competition for value will require constant evolution of product, appropriate supply, policy, industry capacity, air connections and marketing to grow our position.

UNITED STATES 2025

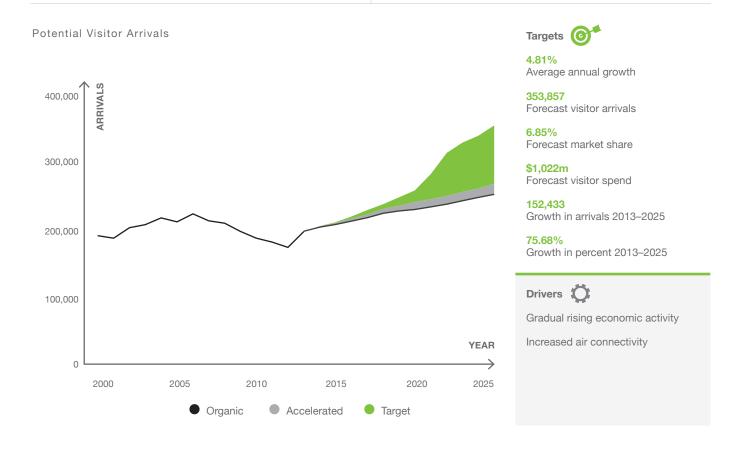

The USA visitor market grew by thirteen percent in 2013 largely due to new air capacity. However over the last decade the market has shrunk eight percent, whilst Australia has seen ten percent growth.

Growth in visitor numbers from the USA has been soft because of a protracted recovery in the economy. GDP is forecast to grow at 2.6 percent per annum to 2025.

USA has the largest market of High Net Worth Individuals worldwide and is forecast to grow by over thirty percent.

A number of actions such as penetration into secondary regions, advancement of cruises, and targeting the luxury segment will support ambitious goals.

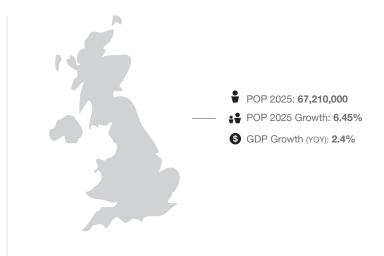

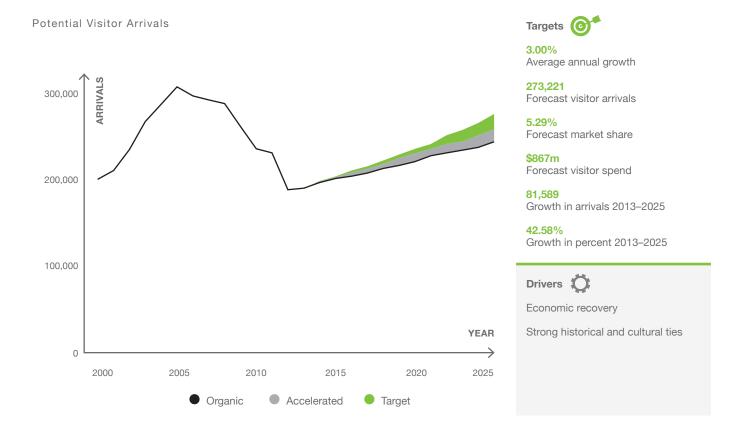

UNITED KINGDOM 2025

Arrivals from the UK are forecast to recover to pre GFC levels over the period to 2025.

Historical, cultural and family ties will ensure the UK remains an important market, but substantial growth will be difficult to achieve. Network development from Asian and Middle Eastern Carriers will continue to support seat availability as aviation shifts towards an Asian growth century. By 2025, it is possible to drive an extra 80,000 arrivals per year from this market.

Events like the Royals tour and Cricket World Cup will support New Zealand's share of voice in the UK market.

INDIA 2025

One of the worlds fastest growing outbound markets, with travel forecast to grow from approximately 14 million in departures in 2013 to 50 million by 2020, the Indian market offers significant opportunity for growth.

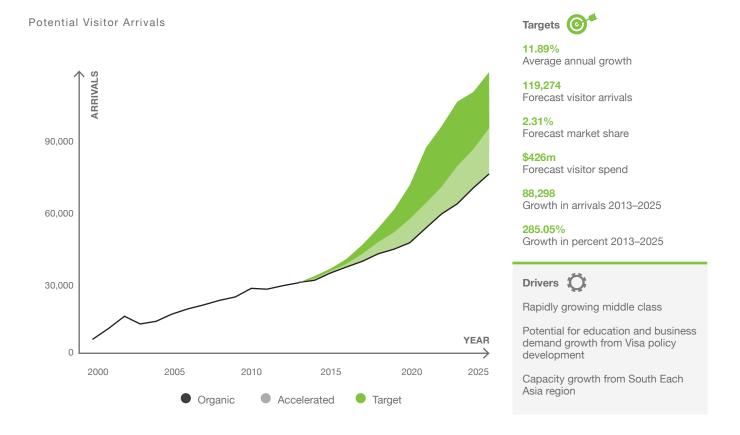

With a middle class of 300 million, an economy growing at eight percent per annum and High Net Worth Individuals forecast to grow by 100 percent over the next decade the economic drivers for increased long-haul travel are strong. The Australasian market is forecast to grow to 370,000 plus, while New Zealand can expect 286 percent growth to 2025. By 2025 this market has the potential to contribute in the order of \$371 million annually.

India, like China is a large, regionalised and segmented market. This means that while it offers many opportunities, they must be approached differently by the tourism industry as regional differences are pronounced across the country. For example, the trend of more

women entering the workforce in India gives rise to a new segment with disposable income for leisure, as well as business travel.

In the medium term, a lack of direct flights to India should not be seen as a barrier to growth. Understanding how to better leverage existing indirect air connections will quickly open up the market.

ARGENTINA, BRAZIL, CHILE 2025

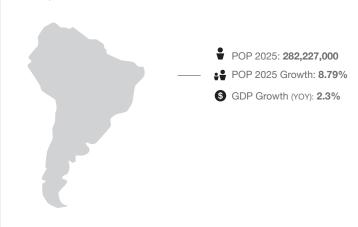

With populations due to grow to over 282 million by 2025 and GDP growth of 2.3 percent per annum plus, these emerging markets offer high growth potential.

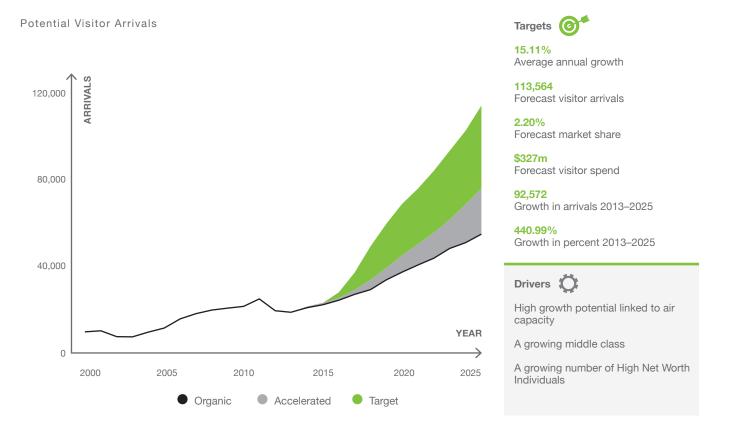

New Zealand's ability to achieve its potential will be highly linked to growth in air capacity. Currently New Zealand attracts 21,000 arrivals from Argentina, Brazil and Chile - a twenty five percent share of the total visitors to Australasia.

As the market matures there is further opportunity for additional daily services. In particular connections to the large market of Brazil have the potential to stimulate a market of 73,000 arrivals.

The region provides significant opportunity in higher value segments. Brazil is also anticipated to experience one of the highest growth rates of High Net Worth Individuals in the world of 138 percent growth, Argentina seventy four percent and Chile fifty five percent.

In combination these markets are expected to contribute 113,000 visitors by 2025.

JAPAN 2025

The Japanese market to New Zealand has been declining over the past decade but is anticipated to recover to over 100,000 arrivals by 2025 through air capacity development and an improving economy.

While macroeconomic and social indicators might suggest sluggish growth and a shrinking potential visitor market due to an aging population, outbound travel from Japan continues to increase. There is significant revitalisation from this market through growing air capacity, both direct and from other points in Asia; and through targeting segments with the right products through the right channels. In 2013 New Zealand received just nineteen percent of the 404,000 arrivals into Australasia. It will be necessary to improve competitiveness to attract long-haul travellers from this market, in an environment where low cost airlines in Asia are driving growth in short-haul. It is anticipated that Japanese visitors who choose to fly to New Zealand as opposed to short-haul Asian destinations will remain

high value visitors. The number of High Net Worth Individuals in Japan however still presents significant opportunity for growth at this end of the market.

Potential Visitor Arrivals **Targets** 3.02% Average annual growth 106.586 Forecast visitor arrivals Forecast market share 150,000 \$306m Forecast visitor spend Growth in arrivals 2013–2025 100.000 42.95% Growth in percent 2013-2025 Drivers 50,000 Sizeable source of high spending visitors YEAR Stable growth in visitor arrivals Strong historical economic ties 2000 2005 2010 2015 2020 2025 Organic Accelerated Target

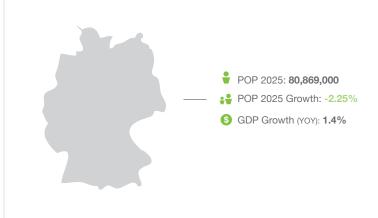

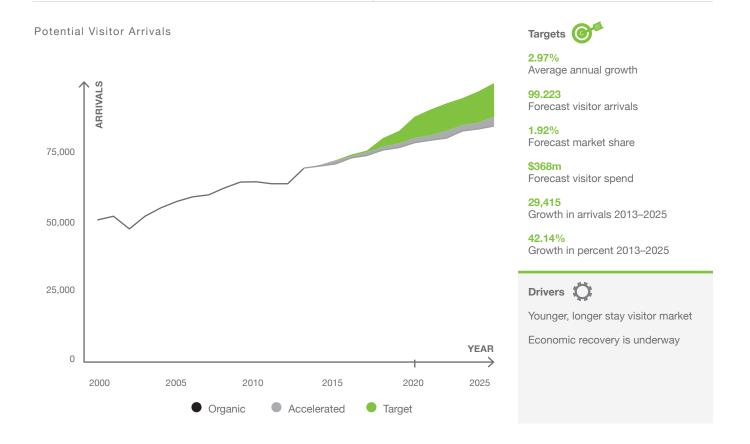

GERMANY 2025

The Germany market is back on track after strong growth in the last twelve months.

A recovery in the market for German arrivals is clearly underway. Growth just below three percent is forecast. We expect airlines to limit seat availability on ultra long-haul markets like Germany to the higher value end of the air travel market or as top-ups during lower seasonal periods.

Germany will continue to be the largest European market for High Net Worth Individuals, that said it is forecast to experience relatively low growth over the decade. To this extent New Zealand will have to target increased market share to grow its overall volume at a higher rate.

KOREA 2025

The Korean visitor market to New Zealand has more than halved over the last decade from 113,908 arrivals in 2004 to 50,992 arrivals in 2013.

Outbound travel from Korea has more than doubled over the last 10 years and one out of every four Koreans travels overseas each year, one of the highest ratios in the world. Korean arrivals to Australia in 2013 increased by four percent while between 2012 and 2013 New Zealand arrivals declined. While the decline has been arrested since, it indicates a significant issue in the development of the New Zealand proposition in Korea. Arrivals to New Zealand remain strongly dual destination with more than half of all arrivals also visiting Australia, this indicates an opportunity to improve visitor flows to New Zealand from traffic already visiting Australia. Korean economic performance is expected to be relatively strong with forecast GDP growth of 3.6 percent year-on-year to 2025. It is anticipated visitor numbers will rebound as economic conditions improve and airlines re-orientate

away from European driven to Asian markets. Total outbound trips from Korea grew eight percent in 2012 to reach a record 13.7 million departures indicating strong potential for growth. An ageing population and maturing consumer demand will also favour further development.

Potential Visitor Arrivals **Targets** 5.47% Average annual growth 96.657 120.000 ARRIVALS Forecast visitor arrivals Forecast market share \$254m Forecast visitor spend 80,000 Growth in arrivals 2013-2025 89.55% Growth in percent 2013-2025 40,000 Drivers Strong rebound of visitors post recession YEAR Strong growth in GDP per capita 0 Further growth in direct air capacity 2000 2005 2010 2015 2020 2025 Organic Accelerated Target

CANADA 2025

Potential Visitor Arrivals

Arrivals have increased nineteen percent in the last decade. In comparison Canadian outbound travel beyond the US and Caribbean has grown seventy seven percent over the same period.

One of New Zealand's traditional markets. Canada's mature arrivals constitute 1.78 percent of our market. This is expected to drop to 1.45 percent by 2025 as emerging markets replace the traditional. However this reduction doesn't equate to a decline in numbers of arrivals. Canadian travellers are expected to reach 74,777 in 2025, up from 48,192 in 2013. Growth in High Net Worth Individuals from Canada is expected to grow thirty five percent over the next decade, this is higher than the US market but slower than Asian markets.

SINGAPORE 2025

Singapore has one of the world's highest GDP per capita and is forecast to have steady growth to 2025.

Singaporean travel outside of South East Asia has doubled in the last decade to 3.4 million trips per year in 2013. In that time Australia has dominated the arrivals to Australasia, with over ninety percent share of the 400,000 annual arrivals while New Zealand has languished, claiming the remaining nine percent of arrivals. New Zealand will need to grow at four percent to maintain share of its competitive set. Potential low cost carrier development between Singapore and Australia provide New Zealand an opportunity to grow both it's high value and low cost propositions. The number of High Net Worth Individuals in Singapore is expected to grow by forty four percent over the next decade and represents a high proportion of the population base suggesting further opportunities to target the higher end value segment. Ambitious growth targets will deliver an extra 20,000 visitors per year to New Zealand.

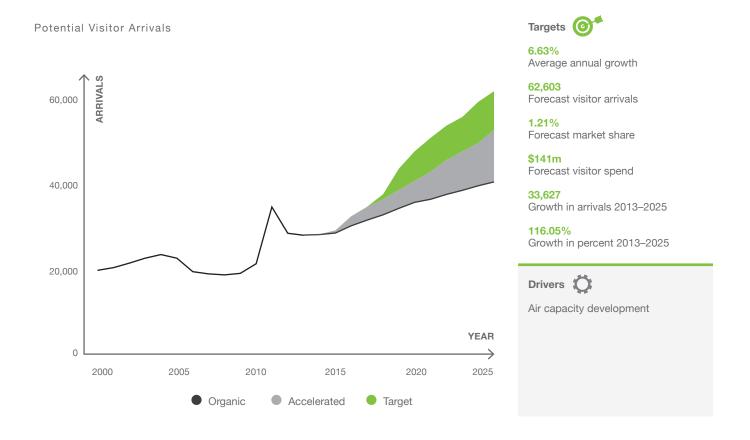

MALAYSIA 2025

Malaysian visitor arrivals remained relatively subdued in 2013 due to a reduction in air capacity relative to 2011 and 2012 due to the exit of Air Asia, however the arrivals number remains thirty three percent higher for 2013 than 2010 as Malaysia Airlines has reshaped capacity to Asian markets.

The holiday visitor market has grown eighty two percent or a CAGR of 16.2 percent over the five years to 2013 despite airfares rising significantly in real terms. With a 2025 population of 35 million, a resilient economy, an outbound travel of approximately 50 million trips per annum and improving airline yields the market remains a strong opportunity for growth with an expected 62,603 arrivals in 2025. Malaysia has seen the incremental development of air capacity in recent years.

INDONESIA 2025

One of Asia's exploding economies, Indonesia will have a population of close to 300 million in 2025.

In 2013 long-haul travel was modest at 1.7 million for a population of 240 million. Economic prospects are good with more than 5.7 percent GDP growth forecast and a growing middle class.

Currently New Zealand attracts less than ten percent of the market of Indonesian arrivals to Australasia. However additional direct air services and expanding connections across Asian hubs will open the market for further expansion.

Holiday traffic while coming from a small base has increased over 110 percent in the last five years at a CAGR above twenty percent. Similarly education traffic in last five years has grown by 172 percent.

High net worth individuals are forecast to grow by 400 percent over the next decade.

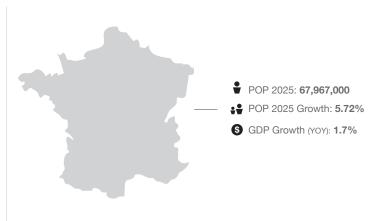

Targets Potential Visitor Arrivals 13.47% Average annual growth 62,457 60,000 Forecast visitor arrivals Forecast market share \$158m Forecast Visitor Spend 40.000 48,745 Growth in arrivals 2013-2025 355.49% Growth in percent 2013-2025 20,000 Drivers Increase in domestic consumption and investment YEAR Sharp increase in outbound 0 departures 2000 2005 2010 2015 2020 2025 Visa policy development Organic Accelerated Target New air capacity

FRANCE 2025

A small, but high value market with recovering growth prospects.

Outbound travel by French holidaymakers to markets outside Europe, North Africa, French Territories and Israel has increased over the past decade by seventy five percent to 7.7 million trips in 2013. New Zealand's market penetration will be affected by the supply of air capacity, but with new network carriers and development of capacity across the Middle East and Asia the opportunity for growth exists. The French High Net Worth Individuals market has grown twenty eight percent in the decade to 2013.

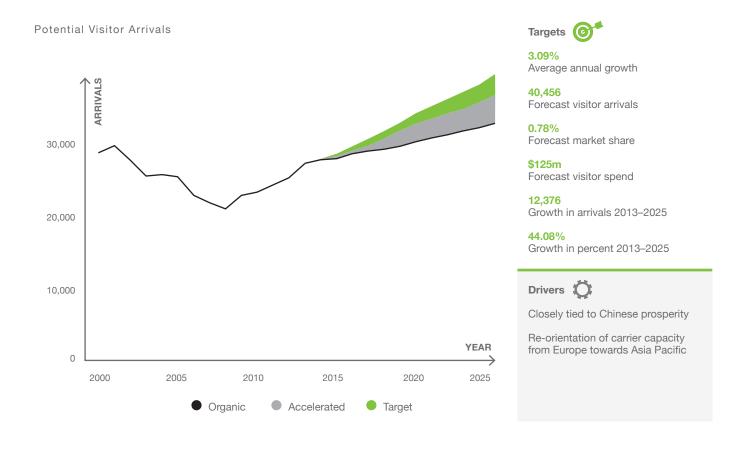

.....

HONG KONG 2025

Visitors from Hong Kong show slow, steady growth.

Economic growth is improving despite some external challenges. New Zealand currently attracts a twelve percent market share of Australasian arrivals; agreements between Cathay Pacific and Air New Zealand have consolidated air capacity. A reshaping away from European traffic will enable further growth from the Hong Kong market totalling 44.1 percent over the period to 2025.

TAIWAN 2025

The Taiwanese market blossoms again. The market is back on trend supported by the Visa waiver programme and growing air capacity.

Outbound departures from Taiwan have been strong with growth eight percent in 2013 to over 11 million departures.

Taiwan's economic growth is closely linked to China and will benefit from growth in the region.

High Net Worth Individuals are expected to grow by fifty percent over the next decade and provide a significant opportunity to target.

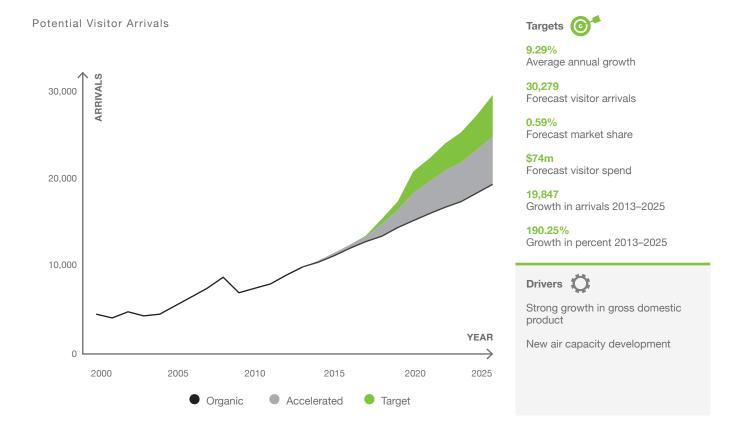

Potential Visitor Arrivals **Targets** 2.75% Average annual growth 40,000 30.152 Forecast visitor arrivals **ARRIVALS** Forecast market share 30,000 \$69m Forecast visitor spend Growth in arrivals 2013-2025 20,000 38.46% Growth in percent 2013-2025 Drivers 1 10,000 Economy is closely linked to China Increasing demand for outbound YEAR travel 0 2000 2005 2010 2015 2020 2025 Organic Accelerated Target

PHILIPPINES 2025

With a population of 119 million by 2025 and GDP growth of nearly six percent per year, the Philippines offers significant market development potential.

Currently New Zealand attracts only 10,000 visitor arrivals or eleven percent of the total 82,000 arrivals to Australasia in 2013. There is clearly a significant opportunity to grow market share. With organic growth the market is anticipated to increase to 20,000 arrivals, but with the development of the continuation of improved air connections the market could be stimulated to over 30,000 by 2025. Further stimulation would be available with the introduction of market development and promotional programmes. High Net Worth Individuals are anticipated to grow by sixty percent over the next decade and therefore offer opportunities to develop product for the high value end of the market.

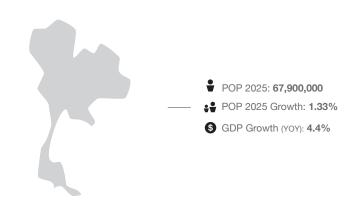

THAILAND 2025

Economic growth in Thailand has been rising rapidly since 2000 and bounced back sharply from the Global Financial Crisis. Growth going forward is dependent on export recovery and strength in private demand.

Thailand ranked as the seventh most "consumer confident" market in the 2013 Nielsen Global Survey of Consumer Confidence and Spending.

Given it's close economic ties with China and strong economic growth in the years since 2000, the potential for sustained growth is present.

New Zealand currently attracts 20,000 Thai visitors per year, with the potential to grow to over 28,000 by 2025, representing nearly thirty seven percent growth between 2013 and 2025.

Potential Visitor Arrivals **Targets** 2.62% Average annual growth 28.253 Forecast visitor arrivals Forecast market share \$50m Forecast visitor spend 20,000 Growth in arrivals 2013-2025 36.46% Growth in percent 2013-2025 10,000 Drivers 1 Strong economic performance YEAR Export recovery and strength in private demand Air capacity 2000 2005 2010 2015 2020 2025 Organic Accelerated Target

About the forecasts

Tourism is one of the worlds largest industries and the competitive environment is constantly evolving as new destinations emerge, marketing budgets increase, policies change, markets open and aviation technologies and business models evolve.

Markets will naturally ebb and flow as the competitive environment changes. However in the early years of this century there has been a significant global shift in economic power towards Asia and as such we have developed a more detailed view of Asian markets in particular in a supporting document Asia 2025.

Ambition 2025 forecasts have been developed by Auckland Airport in conjunction with tourism and aviation consultants. The forecasts provide insight as to where we see the market opportunity for New Zealand. We believe there is further market potential through the development of strategies to influence a step change in demand, supported by strategies which improve the supply of sustainable air capacity.
